Paint change to pulsation dampeners

Models: 6011, 6018, 6022, 6026, 6028, 6029 and 6030

As part of an effort to continually improve our products, Cat Pumps is implementing a change to the paint finish on several of our pulsation dampeners. Beginning with production in April 2020, the original blue hammer tone paint will be replaced with blue epoxy paint.

Improvements:

- Blue epoxy finish offers superior corrosion resistance for applications where pulsation dampeners are exposed to adverse environments.

Functionality Changes:

- No dimensional changes
- No performance changes (same flow and pressure ratings)
- No material changes
- No model number changes

Non-Production Paint

New Product Paint
